### **Reasons For Allowance**

1. The following is an examiner's statement of reasons for allowance:
2. **Claims 9-11, 14** are allowed.

The present invention is directed toward a method for measuring the length of respective queues at the ingress ports to determine the level of broadcast packets. Declaring a broadcast storm when the level of the ingress queue rises above a predetermined threshold level wherein the broadcast control admits broadcast packets when not in the broadcast storm control mode. Each independent claim identifies the uniquely distinct features.

**Regarding independent claim 9**, a broadcast packet control unit having a broadcast storm control mode in which the broadcast packet control unit performs a broadcast storm control operation, the broadcast packet control unit configured to operate in broadcast storm control mode if the obtained measure of the length of the at least one ingress queue rises above a first predetermined level before the data packets are queued in the at least one ingress queue, wherein the broadcast packet control unit is configured to only admit broadcast packets to the at least one ingress queue when not in broadcast storm control mode.

The closest prior art of records, Chang '984 discloses a conventional method for preventing the overloading of the input queue using a counter with respect to broadcast messages, col. 3, lines 62 to col. 4, lines 32.

Bass '471 from the same field of endeavor discloses a conventional method for suppressing of broadcast storm messages based on class count (i.e. predetermined threshold), col. 5, lines 33-58, col. 3, lines 30-39, col. 6, lines 29-38. Bass further discloses processing the broadcast messages when the count of the broadcast messages do not reach the predetermined thresholds, col. 7, lines 17-28, col. 8, lines 1-8, buffer overrun when too many broadcast messages are being generated, col. 1, lines 25-43.

Valdevit '345 discloses method and apparatus for detecting broadcast storm in an emulated LAN (fig. 2 to fig. 3), col. 2, lines 66 to col. 3, lines 15, monitoring the rate at which broadcast messages are arrived, col. 6, lines 1-24.

The closest prior arts are silent with respect to the uniquely distinct features of the independent claim.

The closest prior arts either singularly or in combination fail to anticipate or rendering the claimed features obvious.

**Dependent claim 10-11, 14** are allowed by virtue of their dependency on claim 1.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kesavan et al (US 2004/00622200 A1), Burrows et al (US 7,383,574 B2), Dell et al (US 2002/0136230 A1), Liu et al (US 7,184,421 B1) and Gupta et al (US 7,408,876 B1).
